## 1. PURPOSE

### 1.1 Discussion

This manual provides installation instructions, wiring instructions, and tune-in instructions for the MC521 Pro Controller. It includes instructions for DuraGlide™ 2000/3000, 5200/5300, DuraGuard ${ }^{\mathrm{TM}}$, DuraStorm ${ }^{\mathrm{TM}}$, and DuraMax ${ }^{\mathrm{TM}} 5400$-Series, Automatic Slide door systems.

On Dura-Glide sliding doors, the MC521 Pro Controller replaces the MC521 or both the microprocessor control box and the interface board on older models. The door activation devices (SU-100 motion sensors, carpets, push plates, etc.), lock, function switch, doorway holding beams, and door position switches previously connected to the interface board must be connected to the MC521 Pro Controller.

Attachment 1 illustrates the MC521 Pro Controller controls and indicators. Attachment 2 illustrates system wiring for Dura-Glide series sliders.

### 1.2 Applicability

This manual is applicable to the Dura-Glide series sliding doors used on DuraGlide ${ }^{\text {TM }}$ 2000/3000, 5200/5300, DuraGuard ${ }^{\text {TM }}$, DuraStorm ${ }^{\text {TM }}$, and DuraMax ${ }^{\text {TM }} 5400$-Series, Automatic Slide door systems. Instructions for connecting optional accessories are not provided in this manual.

## 2. PREREQUISITES

### 2.1 Special Items Required

- Stanley Access Technologies document No. 203975, "Stan Vision Installation and Operation" (if installed)
- Stanley Access Technologies document No. 203957, "SU-100 Motion Sensor Installation and Operation" (if installed)
- SU-100 tune-in remote control (if SU-100 Motion Sensor is installed)
- Stanley Access Technologies document No. 203768, "Stanguard ${ }^{\text {TM }}$ Threshold Sensor Installation and Operation" (if installed)
- Optex OA-203C manufacturer's installation and tune-in instructions (if installed)
- Compatible handheld device; visit http://www.stanleyaccesstechnologies.com/index.asp?Mode=DOWNLOADS for a current list of compatible devices
- Bluetooth adapter or cable to connect compatible handheld device to MC521 Pro Controller.
- Degreaser
- Instructions for any other device to be wired into the MC521 Pro Controller.

[^0]204066
Rev. B, 11/21/11
2 of 30

## 3. PRECAUTIONS

3.1 All ANSI/BHMA and UL Requirements in Attachment 4 must be met before the door is put into operation.
4. INSTALLATION INSTRUCTIONS

### 4.1 Installing the MC521 Pro Controller

## NOTE

This manual covers new door installations in which the MC521 Pro is factory-installed and wired.

## 5. WIRING INSTRUCTIONS

### 5.1 Evaluating Power Requirements

5.1.1 EVALUATE door system power requirements as follows:

- ENSURE power source is a dedicated $115 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ source with 20A circuit rating. If four operators are used, the source should have a 30A rating.
- ENSURE no more than four operators will be connected to one circuit.
- ENSURE power source is not shared with other equipment, i.e., cash registers, EAS systems, or other electromagnetic interference generators.

### 5.2 Connecting Main Power Wiring

## WARNING

1. To prevent injury to personnel, incoming electrical power to the header must be deenergized before connecting electrical service to the control box.
2. All electrical wiring must conform to National Electrical Code Requirements.
5.2.1 DEENERGIZE incoming electrical power to header.
5.2.2 Refer to Attachment 2, and, using wire nuts, CONNECT incoming line, neutral, and ground wires to the controller power harness.
5.2.3 IF adhesive wire clamps will be used, DEGREASE metal surfaces on inside of header cover where clamps will mount.
5.2.4 SECURE wiring to top of the header track tube, and ENSURE the following:

- All wires are clear of belts and belt brackets.
- Header cover opens and closes without interference.

### 5.3 Connecting Accessories (As Applicable)

5.3.1 Refer to Attachments 2 and 3, and CONNECT any of the following subsystems to the MC521 Pro Controller:

- Function switch (rotary, rocker and "POWER" switch wiring)
- Stanguard threshold sensor
- Doorway holding beam
- Cycle counter

[^1]204066
Rev. B, 11/21/11
3 of 30

- Breakout switch
- Solenoid lock
- SU-100 motion sensor(s) wiring (refer to Stanley Document \#203957)
- OA-203C presence sensor(s) wiring
- Push plate wiring
- Door position switch closed contact (with door closed)
- Stanvision

## 6. TUNE-IN INSTRUCTIONS

## WARNING

The door path must be free of objects and remain clear until the First Install Sequence (FIS) is complete. During this sequence the sensors are inactive and the door has no SAFETY. To stop the door, turn power off or put the doors into breakout.

## NOTE

1. The MC521 Pro Controller can be tuned-in using a PDA or using the pushbutton switches located on the controller. Tune-in using the PDA is the preferred method.
2. During normal operation, the digital display indicates status codes. The "UP" and "DOWN" pushbutton switches can be used to enter and display data values. The user interface values are shown in Tables 2 through 4.
3. If a solenoid lock is installed with no lock circuit board (new style), set Lock Logic to the actual lock type (Fail Safe or Fail Secure). If a Fail Safe or Fail Secure Lock is being installed with a lock circuit board (old style), the Lock Logic must be set to Fail Secure.
4. Handing: Manually open door noting rotation of belt pulleys. If counter clockwise (CCW) use right hand during FIS. If clockwise (CW) use left hand during FIS. See figure below.
5. The first installation sequence (FIS) is used to perform the initial configuration. Upon completion of FIS, all setup parameters are stored in non-volatile memory. Subsequent power cycles will reload the configuration parameters that were configured during FIS.
6. Decimal points on digital display are encoder 1 signals.
7. After changing values, the values must be saved in EEPROM by cycling the door to full open.

### 6.1 Tuning In the MC521 Pro Controller Using the Palm Handheld

## NOTE

The following steps provide instructions for tuning the MC521 Pro Controller using the Palm handheld. MC521 application software is required. Connect Palm to MC521 Pro Controller, turn on header POWER switch, and perform the following steps.

| Step 1: Select MC521 Tool Box from the list of applications. |  |
| :---: | :---: |
| Step 3: Select DuraGlide. | Step 4: Select applicable Switch Type, Motor Setup, and Motor Handing. |
| First Install Info <br> Door Type Durgglide $\qquad$ <br> Step 5: If additional configuration is needed press Configure Door. | Step 6: Configure additional settings and press Update after each setting has been changed. Once completed, press Cancel to go back to the Main selection menu. |

[^3]204066
Rev. B, 11/21/11
5 of 30

| First Install Info <br> Door Type Durgglide $\qquad$ <br> Step 7: Press Begin AutoConfigure | Warning $\qquad$ <br> !!! WARN\|NG !!! <br> The door path must be free of objects and remain free until complete. <br> Press $O K$ to continue when ready. <br> OK <br> Cancel <br> Step 8: Press OK. |
| :---: | :---: |
| FIS in progress $\qquad$ ${ }^{*}{ }^{*} *$ <br> Put function switch to Hold Open <br> to begin auto configure sequence. | Operate Motor 1 or Motor 2 <br> $\Delta$ <br> Warning: Using this can cause the door to operate and move. <br> Use Cancel to exit. <br> Motor 1 or Motor 2 sends the command to operate the respective motor. <br> Cancel <br> Step 10: For all doors except cart doors press Motor 1 to operate and have door(s) move. For cart doors, press Motor 2 when configuring the second door. |
| WARNING: During this sequence the sensors are inactive and the door has no SAFETY. To stop the door, turn power off or put the doors into breakout. <br> Step 11: Door will go through a learn sequence to configure itself. The door will perform the following operations in learn mode: <br> - Open fully at check speed. <br> - Close fully at check speed. | Step 12: If the door is not operating correctly select Trouble Shoot to enter the Trouble Shooting menu. |

[^4]204066
Rev. B, 11/21/11
6 of 30

|  <br> Step 13: View the I/O grid to verify the sensors and inputs. Dark indicates input/output contact is closed. Light indicates input/output contact is open. Gray never changes. | Step 14: Press More> to access more functions. |
| :---: | :---: |
| More tools <br> Quick Info: MC52 1 State = Idle <br> Slider Single Switches Firmware $=05.20$ <br> Handing: Left. Cycles: 121 <br> Summary Listing <br> Cancel <br> Step 15: Press Summary Listing to view all current settings. | Surnmary  <br> Quick Info: MC521 State $=$ Idle  <br> Slider Single Switches Firmware $=05.20$  <br> Handing: Left. ### 6.2 Tuning In the MC521 Pro Controller Using the Controller Pushbuttons

## NOTE

1. To change the INDEX:

Hold ENTER switch while pressing UP or DOWN to get to desired INDEX
2. To change a VALUE:

Unlock the keypad by setting index 99 to value 00 .
After the desired INDEX is selected, release ENTER and within 2.5 seconds press UP or DOWN to get the desired VALUE. (If the UP or DOWN buttons are not pressed within 2.5 seconds of releasing the ENTER button, the display will change from the VALUE back to the STATUS.)
3. To display STATUS CODE:

A few seconds after the VALUE is selected, the display indicates the STATUS CODE
4. To show the INDEX and VALUE

To show the INDEX, hold ENTER. Once ENTER is released the display will show the VALUE of that INDEX.
5. Read the descriptions entirely before performing each step. Check the INDEX and VALUE after each step.
6. To store changes in permanent memory:

Cycling door open one time will store changes.
7. To lock keypad:

Lock keypad by setting index 99 to value 01 or by turning power OFF and then ON.
8. To access the door cycle counter function:
a. Ensure that the keypad is locked by setting index 99 to 01 .
b. Ensure that the index is set to any index but 99.
c. Press the up or down key to access the door cycle counter.
d. The display will show "dc" followed by four pairs of digits, followed by "dc". For example, if the door count was 12345678 cycles the controller will display "dc" " 12 " "34"" 56 "" 78 " "dc".

Table 1. FIS Procedure using Pushbuttons

| Step | Description | Display |  |  |
| :---: | :--- | :---: | :---: | :---: |
|  |  | Index | Value | Status Code |
| 1 | Set Function switch to "Closed." |  |  |  |
| 2 | Turn power on. |  |  |  |
| 3 | Unlock keypad. | 99 | 00 | 00 |
| 4 | Restart FIS. | 96 | 01 | A0 |
| 5 | Select door type: Slide, $\underline{01}$ single motor or $\underline{02}$ dual motor. | 00 | 01 (single) <br> 02 (dual) | A0 |

| Step | Description |  | Display |  |
| :---: | :--- | :---: | :---: | :---: |
|  |  | Index | Value | Status Code |
| 6 | Select handing: 00 Right or 01 Left. <br> Manually open door and note rotation of belt pulleys. <br> If counterclockwise (CCW) use right hand during FIS. <br> If clockwise (CW) use left hand during FIS. | 01 | 00 (right) <br> 01 (left) | A0 |
| 7 | Accept FIS. Display will go to A1. | 03 | 01 | A1 |
| 8 | Make changes: Function switch <br> 01 Rocker or 00 Rotary. The INDEX will start at 00. | 11 | 01 rocker <br> 00 rotary | A1 |
| 9 | Select Lock Logic: Lock Logic, 00 = Fail Safe; 01 = Fail <br> Secure. Note: For locks with circuit board, set to 01 Fail <br> Secure. For locks with no circuit board, set to Fail Safe or <br> Fail Secure. | 07 | 00 Fail Safe <br> 01 Fail Secure |  |
| 10 | WARNING: During this sequence the sensors are <br> inactive and the door has no SAFETY. To stop the <br> door, turn power off or put the doors into breakout. <br> Function switch: Switch to OPEN, momentarily, then <br> CLOSED/LOCKED. Wait for the learn sequence to end. <br> Display will show A2 when finished. |  | A2 |  |
| 11 | Lock keypad. |  | 01 |  |
| 12 | Final Tune in. |  | 09 | 00 |

Table 2. Index List

| Index | Description |
| :---: | :--- |
| $00-89$ | Settings Values, see Table 3. |
| $90-95$ | Reserved. |
| 96 | Command - Restart FIS. Entering "01" will cause FIS to restart. |
| 97 | Firmware - Entering "01" will display "FE" followed by two pairs of digits followed by "FE". For <br> example, if the firmware was 0609 the controller will display "FE" "06" "09" "FE". |
| 98 | Command - Restart auto configuration. Entering "01" will cause auto configuration. |
| 99 | Command - Lock. Entering "01" will lock all value inputs except this index. This prevents <br> inadvertent changes to input values. Values may be unlocked by entering "00" in this index. |

Table 5. Door States

| Door State |  |
| :---: | :--- |
| 00 | Door State is Closed |
| 02 | Door State is Opening |
| 04 | Door State is in Open Check |
| 06 | Door State is Full Open |
| 07 | Door State is Closing |
| 09 | Door State is in Close Check |
| 15 | Door State is in Open Stop |
| 16 | Door State is in Close Stop |
| 17 | Door State is in Close Press |

NOTE: If the current status code is "Normal operation-All OK", the MC521 Pro will show the current door state. Otherwise, the MC521 Pro alternates between showing the current status code and the door state.

### 6.3 Final Tune-In Adjustments

6.3.1 Refer to ANSI A156.10, "American National Standard for Power Operated Doors," and Attachment 4 and DETERMINE ANSI and UL door operating requirements.
6.3.2 IF Stanguard threshold sensor is installed, refer to Stanley Access Technologies document No. 203768, "Stanguard ${ }^{\text {TM }}$ Threshold Sensor Installation and Operation," and TUNE-IN Stanguard threshold sensor.
6.3.3 IF SU-100 motion sensor(s) are installed, refer to Stanley Access Technologies document No. 203957, "SU-100 Motion Sensor Installation and Operation," and TUNE-IN SU-100 motion sensor(s).
6.3.4 IF OA-203C presence sensor(s) are installed, refer to manufacturer's instructions and TUNE-IN OA-203C presence sensor(s).
6.3.5 To ensure that all settings have been stored in EEPROM memory, turn power OFF and then back ON. Repeat step 6.3.1.

## ANSI/BHMA and UL Compliance Requirements for Sliding Doors

(Sheet 1 of 2)

## Final adjustment and proper operation of the door system must be and shall be performed in the field.

Note: These instructions are for informational purposes and do not substitute for review against the current revision of the referenced standards. Where a requirement exists in multiple standards, such as the ANSI/BHMA standard and the UL standard, the more restrictive condition applies. Other local codes and fire codes likely exist, and must also be followed.

### 1.0 ANSI/BHMA A156.10 Sliding Door Systems

Sliding door systems must be installed and adjusted for compliance with the current version of ANSI/BHMA A156.10, "American National Standard for Power Operated Pedestrian Doors",

Critical aspects of the installation for compliance with A156.10 include:

- Control mat size, layout, molding height, active areas and sensitivity.
- Sensor pattern size, sensitivity, and function.
- Knowing Act guidelines and secondary activating zone.
- Entrapment protection rules including door speeds, forces, and time delays.
- Signage. (Decals and application instructions are provided with the door system.)

All power operated door systems must be installed in compliance with the current edition of UL 325, "Standard for Safety for Door, Drapery, Gate, Louver, and Window Operators and Systems".
2.1 Wiring
2.1.1 To reduce the risk of electric shock proper and reliable grounding is mandatory. See Main Power Wiring instructions and Wiring Diagrams in this guide for grounding techniques.
2.1.2 Permanent wiring is to be employed as required by the National Electrical Code and/or local codes.
2.1.3 Connection of external devices is shown in the wiring diagrams and terminal block layouts elsewhere in this guide. Refer to these figures for proper wiring of external devices to ensure compliance with UL 325.
2.2 Knowing Act

Doors activated by a manual switch (Knowing Act switch in ANSI/BHMA terms) must have the switch installed in a location from which operation of the door can be observed by the person operating the switch.

## ANSI/BHMA and UL Compliance Requirements for Sliding Doors

(Sheet 2 of 2)

Closing Speed
Closing speed is measured over a travel distance of 2 or 3 feet. On smaller bi-part doors there may only be 2 feet of movement before the door system enters closecheck (latch check). The time measurement should start once the door has achieved closing speed, usually 6 inches from full open. Mark this point on the floor with tape or other object. Measure from this point 2 or 3 feet toward the closed position and mark the next point. Use a stopwatch to measure the time it takes for the sliding panel to travel this distance during normal closing cycles. Make sure the door system is not braking or entering close-check during the measurement. Repeat the measurement 3 times and use the average value. The allowed time for a sliding panel to cover this distance during the closing cycle is given in the table below.

| Door Weight <br> (pounds) | Closing speed (seconds) <br> 2 foot measurement | Closing time (seconds) <br> 3 foot measurement |
| :---: | :---: | :---: |
| 160 or less | 2.0 | 3.0 |
| 161 to 180 | 2.1 | 3.2 |
| 181 to 200 | 2.2 | 3.3 |
| 201 to 220 | 2.3 | 3.5 |
| 221 to 240 | 2.4 | 3.7 |
| 241 to 260 | 2.5 | 3.8 |
| 261 to 280 | 2.6 | 4.0 |
| 281 to 300 | 2.7 | 4.1 |
